

Intro to SharePoint Event Receivers

A real world example

Continuing the last demo...

- **When document is 'Locked'**
 - **Make the document read-only to everyone**
- **The document can only be 'Locked' by a certain group of users.**

Event Receivers != Workflow

- **Event Receivers do not wait for a response from anyone!**
- **Workflows have pauses in its chain of execution.**

Event Receiver Methods (Some of them)

- **ItemAdded**
- **ItemAdding**
- **ItemCheckedIn**
- **ItemCheckedOut**
- **ItemDeleted**
- **ItemDeleting**
- **ItemUpdated**
- **ItemUpdating**

-ed

The code will run **after** the change has been committed to the SharePoint Content Database

-ing

The code will run **before** the change has been committed to the SharePoint Content Database
